Project RoU Verification Report

2022

COVER PAGE

RoU Project Verification Report Form (VR)					
BASIC INFORMATION					
Name of approved UWR Project Verifier / Reference No.	Enviance Services Private limited				
Type of Accreditation	RoU Accreditation UWR Water Audit/Water Footprint Expertise				
Approved UWR RoU Scopes for Project Verification	RoU Scope 5: Conservat measures taken to recycle and reuse water, spent was wastewater etc. across or with specific industrial processes a systems, including wastewarecycled/ reused in a different process, but within the same site location of the project activent Recycled wastewater used in a site landscaping, gardening or to plantations/forests activity are a eligible under this Scope.				
Validity of UWR approval of Verifier	30/09/2027				
Completion date of this VR	10/12/2024				
Title of the project activity	ETP wastewater Treatment by Gangamai Industries & Constructions Ltd				
Project reference no. (as provided by UWR RoU Program under Approved for Verification tab)	UWR ID: 463				
Name of Entity requesting verification service (can be Project Owners themselves or any Entity having authorization of Project Owners, example aggregator.)	Viviid Emissions Reductions Universal Pvt. Ltd. Name: Lokesh Jain Email ID – lokesh.jain@viviidgreen.com				
Contact details of the representative of the Entity, requesting verification service	Viviid Emissions Reductions Universal Pvt. Ltd.				
(Focal Point assigned for all communications)	Name: Lokesh Jain Email ID – lokesh.jain@viviidgreen.com				
Country where project is located	India				

Applied reference documents used for estimation	Water Data Guide
(approved water data and reference guides under the UWR Rou Standard used)	
Project Verification Criteria: Mandatory requirements to be assessed	 ☑ UWR Standard ☑ Applicable Approved Calculations ☑ Applicable Legal requirements /rules of host country ☑ Eligibility of the Project Type ☑ Start date of the Project activity ☑ Meet applicability conditions in the applied methodology ☑ Credible Water Data Sets ☑ Do No Harm Test ☑ ROU calculations ☑ PCNMR ☑ No Double Counting ☐ Others (please mention below)
Project Verification Criteria: Optional requirements to be assessed	 Environmental Safeguards Standard and do-no-harm criteria Social Safeguards Standard do-no-harm criteria
Project Verifier's Confirmation: The UWR Project Verifier has verified the UWR project activity and therefore confirms the following:	The UWR RoU Project Verifier [Enviance Services Private Limited], certifies the following with respect to the UWR Project Activity [ETP wastewater Treatment by Gangamai Industries & Constructions Ltd]. The Project Owner has correctly described the Project Activity in the PCNMR version 2.0 (dated 25/11/2024) including the applicability of the guidance documents and water data as outlined in the UWR RoU Standard [RoU Scope 5: Conservation measures taken to recycle and/or reuse water, spent wash, wastewater etc. across or within specific industrial processes and systems, including wastewater recycled/ reused in a different process, but within the same site or

location of the project activity. Recycled wastewater used in offsite landscaping, gardening or tree plantations/forests activity are also eligible under this Scope] and meets the applicability conditions and has achieved the estimated RoUs, complies with the monitoring methodology and has calculated RoU estimates correctly and conservatively. generate 569,135 RoUs indicated in the PCNMR version 2.0, which are applicable with UWR rules ☐ The Project Activity is not likely to cause any net-harm to the environment and/or society with all the applicable UWR rules1 and therefore recommends UWR Program to register the Project activity with RoUs. Project Verification Report, reference number and date of Verification Report UCR Project ID: approval 463 Date: 11-12-2024 Vidhya Murali Krishna Name of the authorised personnel of UWR Project Verifier and his/her signature with date **Quality Manager** Date: 11/12/2024

PROJECT VERIFICATION REPORT

Executive summary

The project activity is titled – "ETP Wastewater Treatment by Gangamai Industries & Constructions Ltd.". The project is located in Harinagar, Najik Babhulgaon, Post: Rakshi, Tal-Shevgaon, Dist: Ahmednagar, Maharashtra, India.

Company's Name	Plant Treatment Capacity (m³/d)	Cor	nmissioning Date	Location	Geo co- ordinates of Location
Gangamai Industries and Constructions Limited (GIACL)	Installed capacity = 1000 m³/d (1 MLD) Operational capacity = 563 m³/d (0.563 MLD)	ETP	10/12/2013	Harinagar, Najik Babhulgaon, Post: Rakshi, Tal-Shevgaon, Dist: Ahmednagar, Maharashtra, India	19°22'47.28" N & 75°17'00.72" E

The project activity includes Gangamai ETP, Gangamai Industries and Constructions Limited (GIACL), Harinagar, Najik babhulgaon, Taluka Shevgaon, District Ahmednagar (M.S.) is one of the companies of Padmakar Mulay Group of Companies, Aurangabad and is into the manufacturing of sugar & production and marketing of Distillery & Ethanol.

Considering the sugarcane availability in the factory area, the company had established a 2500 TCD Sugar Plant and started crushing operations from January 2001 onwards at Harinagar, Post. Ghatnandra, Ta. Sillod, Dist. Aurangabad, Maharashtra, Pin code- 431 113. Thereafter, Ethanol Plant and Distillery Plant both 30 KLPD were established and put in operations in June 2004 and April 2007 respectively.

GIACL affirms that they meet all the requirements outlined in the management plan regarding ownership, legal rights, permits, and cost details for the successful implementation of the project. Specifically.

Water User Rights: GIACL holds the necessary water user rights for the area within the project's boundary. These rights are legally secured and ensure that the GIACL has full entitlement to use the water resources required for the project's operations.

Legal Land Title: GIACL holds an uncontested legal land title for the entire project area within the project's boundary. The title is fully documented and free of any disputes, confirming the GIACL's legal right to utilize the land for project purposes.

Necessary Permits: GIACL has obtained all the required permits for the implementation of the project. In cases where certain permits are pending, GIACL has already applied for the necessary approvals and is working in full compliance with the relevant regulatory requirements to ensure the timely commencement of the project.

Cost Details: GIACL has thoroughly assessed and documented the cost details for project implementation. A detailed cost breakdown is available, covering all aspects of project development, including infrastructure, permits, equipment, and operational costs.

GIACL has installed 1MLD Effluent Treatment Plant (ETP) on 10 Dec'2013 to treat and recycle the wastewater generated from the production process. The operational capacity of the plant is 0.563 MLD. By treating and reusing wastewater, the company can contribute to environmental conservation and reduce soil contamination. The Total Water requirement for Sugar Factory is 3550 M³/Day. Out of which 527 M³/Day would be the fresh water from Jayakwadi Dam on Godavari river and remaining is 3023 M³/Day (condensate water- 3006 M³/Day + Rain water Harvesting- 17 M³/Day).

The sugar industry generates a significant amount of wastewater from various stages of production process, which contains high levels of pollutants such as organic matter, suspended solids, and various chemicals. The process includes water used for cane washing, which cleans the sugarcane before processing, and juice extraction, where water is utilized in the milling process to extract juice from the cane. During boiling and crystallization, water is employed to concentrate the juice and form sugar crystals. Additionally, water is used in cooling and condensing to cool and condense vapours during the boiling process. Finally, cleaning and maintenance activities within the factory premises also contribute to wastewater generation, as water is used to clean equipment and maintain hygiene standards.

If the wastewater is released into the environment without proper treatment, it can cause severe pollution, affecting aquatic life, soil quality, and human health.

Therefore, this project activity helps reduce the environmental impact by treating wastewater and utilizing it for Gardening and agricultural purposes such as Irrigation, further promoting sustainability.

The project activity qualifies under the UCR RoU program since the PP has undertaken water conservation measures to recycle and reuse Industrial wastewater. Industrial Wastewater is a highly potential source of water for various purposes and is highly underutilized in the country. All the water quality reports are in line with the Maharashtra Pollution Control Board (MPCB).

The current monitoring period is from 01/01/2014 to 31/12/2023 and the RoU's generated by the project activity in this monitoring period are 569,135 RoU's.

Scope of Verification

The scope of the services for the project is to perform Project Verification of concerned Project Activity. The scope of verification is to assess the claims and assumptions made in the Project Concept Note & Monitoring Report (PCNMR) against the UWR criteria, including but not limited to, UWR program verification guidance document, UWR Standard, UWR Program Manual, and related rules and guidelines established under Program process.

Verification Process and Methodology

The verification process was undertaken by a competent verification team and involved the following,

- Desk review of documents and evidence submitted in context of the reference rules and guidelines issued by UWR,
- Undertaking/conducting site visit/remote audit, interview or interactions with the representative of the project owners/representatives,
- Reporting audit findings with respect to clarifications and non-conformities and the closure of the findings, as appropriate and preparing a draft verification opinion based on the auditing findings and conclusions
- Finalization of the verification opinion (this report)

Desk/Document review

A detailed desk review of the PCNMR, Methodology and all other associated documentation and references took place in advance of the remote site visit, and additional documents that were not available for the desk review were requested for review during the remote site visit. Additional information can be required to complete the verification, which may be obtained from other public and reliable sources or through telephone and face to face interviews with key stakeholders (including the project developers and where necessary, government and NGO representatives in the host country).

A list of all documents reviewed or referred to in the course of this verification is included below in Appendix 3.

Follow up interviews/site visit

The verifier conducted remote audit and had requested for site photographs, short videos. A remote interview was conducted with the project owners and stakeholders.

Conclusion

Based on the work performed, the verifier concludes that the "ETP Wastewater Treatment by Gangamai Industries & Constructions Ltd.". The information and data presented in the PCNMR version 2.0 dated 25/11/2024 meets all relevant requirements of the UWR for UWR project activities.

For the current monitoring period, verified RoU's achieved by the project activity were as below;

Start date of monitoring period	01/01/2014
End date of monitoring period	31/12/2023
RoU's achieved	569,135 RoU's

Project Verification findings

Identification and eligibility of project type (Approved Project Activities (Positive List))

Means of Project Verification	The project is an effluent treatment plant with installed treatment capacity of 1000m³/day (1 MLD) and operational capacity of 563 m³/day (0.563 MLD). This is confirmed based on the commissioning certificate, operational capacity document and technical specifications. Since the project is a effluent treatment plant which recycles and reuses industrial wastewater it comes under scope 5 project as per UWR Rainwater (RoU) Standard, version 7.0 (https://a23e347601d72166dcd6-16da518ed3035d35cf0439f1cdf449c9.ssl.cf2.rackcdn.com//Documents/RainWaterOffsetStandardver7 130824144129526582.pdf) The Project owner has used valid PCNMR form available at the UWR website for the preparation of PCNMR for the current project activity. The project has prepared PCNMR in line with UWR guidance and requirements.
Findings	No findings raised
Conclusion	The UWR-approved format is used for description and the project meets the requirement of the UWR RoU verification standard version 2.0 and UWR RoU standard version 7.0. UWR project communication agreement was submitted to the verifier and the same has been verified. Methodology referenced and applied appropriately describing the project type. The eligibility of the project aggregator is verified using the UWR communication agreement, project correctly applies the verification standard, UWR project standard, and UWR regulations. The project activity is overall meeting the requirements of the UWR Verification standard and UWR project standard.

General description of project activity

Means of Project Verification	The project is an effluent treatmer capacity of 1000m³/day (1 MLD) m³/day (0.563 MLD) and its commithe commissioning certificate of confirm the treatment of wastewath project. Assessment team conducted doculagainst the UWR RoU verification RoU standard version 7.0 and th 3.0. By checking the supporting docular project is an effluent treatment Harinagar, Najik babhulgaon, Ahmednagar, Maharashtra state coordinates of the project locations. Plant Treatment Capacity (m³/d) Installed capacity = 1000 m³/d (1 MLD) Operational capacity = 563 m³/d	and operational capacity of 563 issioning date is verified through f the project. The documents er from the sugar industry in this mentation review of the PCNMR standard version 2.0 and UWR e UWR-PCNMR-FORM Version uments, it is confirmed that the plant, the project is located in Taluka Shevgaon, District of India. The approximate geo-	
	(0.563 MLD) Assessment team performed an offsite inspection of project and confirmed that the location described in the PCNMR are accurate.		
Findings	CL 01, CL 02 and CL 04 were raised and closed successfully. More		
	information presented appendix below.		
Conclusion	The description of the project activity is verified to be true based on the review of PCNMR, Commissioning Certificate and other submitted documents.		

Application and selection of water data and calculation parameters

Application and Selection of water data and calculation parameters			
Means of Project Verification	Verification criteria is as per the requirements of UWR RoU program		
	for the scope – 5.		
	For applicability mentioned in the PCNMR, commissioning		
	certificates, DPR, technical specifications, flow meter data were		
	checked.		
Findings	No findings raised.		
Conclusion	The project has effectively implemented the water treatment unit		
	following the guidelines of UWR RoU standards by recycling and		
	reusing the industrial wastewater and has a positive impact of local		
	hydrology and community water resources.		

Clarification on applicability of tool and/or RoU estimates

Means of Project Verification	The documents reviewed are ETP basics, ensuring proper operation	
	of flow meters, RoU estimates by reviewing the flow details, UWR	
	RoU standard, and UWR RoU Verification Standard.	
Findings	No findings raised.	
Conclusion	The verification team confirms that all the applicability criteria set by	
	the UWR RoU standard are met. The relevant information against	
	those criteria is also included in the PCNMR. The selected scope for	
	the project activity is applicable.	

Project boundary, sources and RoUs

Means of Project Verification	Conducting remote inspections of the project site to assess the effluent treatment plant setup and its integration with the Gangamai Industries and Constructions Limited (GIACL). Document Review: Examining the project's documentation, including permits, ownership documents, flow details.
Findings	No findings raised
Conclusion	The project boundary is correctly defined in the PCNMR. The ETP is the project boundary in this project which treats the industrial wastewater by enhancing the water conservation and sustainability of the local water reserves.

Baseline scenario of the water shed or activity prior to project commissioning

Means of Project Verification	As per the UWR scope 5 project the baseline scenario is as following: "The net quantity of treated ETP effluent / wastewater that would be discharged directly into the local drain/sewer without further being recycled and/or reused daily post treatment per year" Remote audit conducted and document review showed that in absence of the project activity, the waste water would have been directly discharged in the sewer without treating it and further contaminating the local water reserves.
Findings	No findings raised
Conclusion	The approved baseline methodology has been correctly applied to identify a realistic and credible baseline scenario, and the identified baseline scenario most reasonably represents what would occur in the absence of the proposed UWR project activity.
	All the assumption and data used by the project participants are listed in the PCNMR and/or supporting documents. All documentation relevant for establishing the baseline scenario are correctly quoted and interpreted in the PCNMR. Assumptions and data used in the identification of the baseline scenario are justified appropriately, supported by evidence and can be deemed reasonable.

Implementation Benefits to Water Security

Means of Project Verification	Examining the PCNMR, commissioning certificate, legal
	documentation and any other relevant documentation.
	By conducting interviews with the project proponent, owners. By
	assessing the water quality reports, as well as the impact of
	untreated water on local water reserves and quality testing was
	conducted by analyzing the quality of water post treatment.
Findings	No findings raised.
Conclusion	The Implementation Benefits to Water Security emphasizes the
	significant positive impact in safeguarding aquatic ecosystem in
	Dhora river and soil health. The project successfully significantly
	reduces the reliance on groundwater, a precious natural resource.
	By minimizing the demand for fresh water, GIACL can contribute to
	water conservation efforts and alleviate pressure on depleting
	aquifers. Overall, the project demonstrates effective strategies for
	reducing captive water consumption and responsibly managing
	groundwater, the project hopes to foster a broader adoption of
	environmentally responsible approaches within the industry.

Estimation of RoUs or net water saved/recycled/reused

Means of Project Verification	Remote inspection of the ETP unit to ensure it matches the project documentation. Examination of PCNMR, Commissioning Certificate, Project plan was carried out and other relevant documentation provided by the project proponent. Measurement Verification was carried out by checking the flow details. The net quantity of treated water used is measured via flow meters installed at the site. RoUs are calculated based on total quantity of treated water being recycled & reused. RoU's achieved during the first monitoring period as per the Project			
	Activity:	Year	Total ROUs (1000 liters)/yr UCR Cap(1 million RoUs/yr

demonstrating the project's positive impact on water security and
sustainability in the region. The project serves as a model for similar
industrial areas, showcasing the benefits of treating wastewater in
enhancing in safeguarding the water quality of local water reserves.

PCN+Monitoring Report

Means of Project Verification	Conducting off-site audit to verify the implementation and operation of the ETP. Examining all relevant documents, such as permits, ownership papers, and maintenance records of the ETP. Talking to the project proponent about the operation of the unit. Checking the accuracy of reported data, such as the flow details, flow meter details, treated water details and by evaluating the design and technical aspects of the ETP to ensure it aligns with the UWR RoU Standard principles.
Findings	CL 07 and CL 08 were raised and closed successfully. More information presented appendix below.
Conclusion	The verification team is convinced of compliance of the monitoring plan. During the remote audit assessment, the verification team interviewed the PP that the monitoring arrangements described in the monitoring plan are feasible within the project design.
	The monitoring parameter reported in PCNMR adequately represents the parameters relevant to RoU calculation. The calibration report ensures the accuracy of the data reported. The number of RoU's generation is calculated based on this accurately reported data. The calculation was done using an excel sheet where all the parameters were reported. In the PCNMR RoU calculations are correctly calculated and reported. The PCNMR meets the requirements of UWR project verification requirements.

National Water Security Index

Means of Project Verification	As per UWR RoU standard version 7.0 all projects RoU methodology are ideally below the NWS score of 60 and NWSI equal or lower than 2 (NWSI ≤ 2). India's NWS score is below 60. This index is considered in establishing and implementing policies for sustainable water and groundwater development. As mentioned in the PCNMR, commissioning certificate and DPR this project is not a groundwater restoration project. It is an effluent treatment unit.
Findings	No findings raised
Conclusion	The verification team on assessment concluded that the project is an industrial wastewater recycle and reuse project and not a groundwater restoration project. Hence, national water security index is not applicable in this project.

Start date, crediting period and duration

Means of Project Verification	The start date and crediting period of project activity was checked based on the commissioning certificate, PCNMR and other documents provided.
Findings	No findings raised.
Conclusion	The project has chosen crediting period start date as 01/01/2014. The crediting period is chosen as 01/01/2014 to 31/12/2023.

Positive Environmental impacts

Means of Project Verification	PP has not claimed any separate positive environmental impact. The project being industrial wastewater treatment unit will reduce the further contamination of the local water reserves.
Findings	No findings raised
Conclusion	The project is a wastewater recycle/reuse project and reduces the further contamination of groundwater and local water reserves.

Project Owner- Identification and communication

Means of Project Verification	PCNMR, communication agreement, commissioning certificate.
Findings	No findings raised
Conclusion	The project owner was identified through a communication agreement signed between project owner and project aggregator. Commissioning certificate was also verified and they clearly establish the project ownership. The identification and communication correctly meet the requirement of project verification and UWR project standard. Project owner: Gangamai Industries and Constructions Limited (GIACL)

Positive Social Impact/Ecological Aspects/Recharge Aspects

Means of Project Verification	Project has provided temporary employment to local people during
Means of Project Verification	Project has provided temporary employment to local people during its installation and commissioning. Also post commissioning some of people have employed permanently and local people were engaged leading to social financial benefit to surrounding. Overall social impact of project implementation is positive on the surrounding area. Also, The PP has showcased the successful wastewater treatment of industrial effluent, thus saving millions of liters of wastewater for the
	The project activity showcases best-in-class wastewater treatment technology that can replace the equivalent freshwater and industrial demand in different sectors for nonportable purposes while reducing the proportion of untreated wastewater and substantially increasing recycling and safe reuse in India.
Findings	CL 05 and 06 were raised and closed successfully. More information presented appendix below.
Conclusion	Project has overall social positive impact and ecological positive impact

Sustainable development aspects

Means of Project	PP has claimed SDG Goals 3, 4, 6, 8 & 13.
Verification	SDG 3 is good health and well-being and it is verified during remote audit. PP
	showcases how recycling and reusing wastewater can prevent depletion of
	natural water reserves and prevent water scarcity during droughts. The
	hazardous impact of industrial wastewater is avoided due to this project. This
	ensures water availability in water-scarce zones that help promotes healthy
	lives and well-being in the region.

	SDG 4 is Quality Education. During remote audit it was verified that the PP has
	provided School bus to the staff and children for better transportation.
	PP has installed smart tv in the nearest village school and constructed
	Classroom in nearest village.
	PP has conducted Educational & Health Awareness for the employees and
	villagers.
	SDG 6 is sustainable development and is verified during remote audit. The
	project has showcased recycling and safe reuse of 563 cubic meter/day (0.563
	MLD) which is the operational capacity of the plant and the actual installed
	capacity is 1000 cubic meter/day (1 MLD) within the industry during this
	monitoring period and the same was verified by the assessment team.
	SDG 8 is decent work & economic growth and this was verified by the
	supporting document of employment details provided.
	SDG 13 is climate action. This was verified during the remote audit. PP
	recycles and reuses the industrial wastewater. Recycling and reusing
	wastewater is an effective solution for climate change adaptation because it
	helps mitigate the impacts of droughts, floods, and other extreme weather
	events that are becoming increasingly common due to climate change due to
	water scarcity.
Findings	CAR 02 was raised and closed successfully. More information presented
	appendix below.
Conclusion	The project has the capability to address SDG 3, 4, 6, 8 and 13.

Internal quality control

The verifier confirms that,

- Due professional care has been taken while reviewing the submitted document.
- There is no conflict of interest as the verifier has no other engagement with either the aggregatoror project owner directly or indirectly.
- Verification team consists of experienced personnel.

Project Verification opinion

Assessment team conducted documentation review the PCNMR against the UWR RoU verification standard version 2.0 and UWR RoU standard version 7.0 and the UWR-PCNMR FORM Version 3.0.

It is confirmed that the project activity is an industrial effluent treatment plant, that is located in Harinagar, Najik Babhulgaon, Post: Rakshi, Tal-Shevgaon, Dist: Ahmednagar in the state of Maharashtra, India. The geo co-ordinates of the plant have been mentioned in sections above. Assessment team performed an offsite audit and confirmed that the location described in the PCNMR is accurate. The verification was performed on the basis of UWR requirements, and host country criteria, as well as criteria given to provide for consistent project operations, monitoring and reporting.

The verification consisted of the following three phases: i) desk review of the PCNMR and additional background documents; ii) follow-up interviews with project stakeholders; iii) resolution of outstanding issues and the issuance of the final verification report and opinion.

The project correctly applies the approved baseline and monitoring methodology.

The monitoring plan provides for the monitoring of the project's Rainwater Offset Unit (RoU) calculations. The monitoring arrangements described in the monitoring plan are feasible within the project design, and the project participants are able to implement the monitoring plan. Given that the project is implemented and maintained as designed, the project has achieved the RoU's of 569,135 RoU during the monitoring period i.e. from 01/01/2014 to 31/12/2023.

The review of the project design documentation and the subsequent follow-up interviews have provided assessment team with sufficient evidence to determine the fulfilment of stated criteria. In our opinion, the project meets all applicable UWR requirements. Assessment team thus requests the registration of the proposed UWR project activity.

Appendix 2. Competence of team members and technical reviewers

- Mr. Pankaj Kumar worked as team leader Bihar for South Asia Climate Proofing and Growth Development (CPGD) - Climate Change Innovation Programme (CCIP) supported by DFID that seeks to mainstream climate change resilience into planning and budgeting at the national and sub-national level in India, Pakistan, Nepal, and Afghanistan. Pankaj Kumar has worked previously with IL&FS Infrastructure Development Corporation and BUIDCO (Bihar Urban Infrastructure Development Corporation), Govt. of Bihar as Environmental Specialist for WB & ADB funded projects. Prior to this, he worked with Carbon Check (UNFCCC accredited DoE), Johannesburg, RSA, Applus certification as Team Leader for validation, verification of around 100 GHG projects in Asia, Africa, USA, Asia Pacific & Americas. Pankaj is accredited Lead Auditor, Validator, Verifier and Technical Expert for Sectoral Scope/Technical Area - 1.1, 1.2, 3.1, 4.1, 13.1 by Enviance. He is also member of task force on climate change & human health, Health Department, GoB and on roster of UNICEF's WASH experts. He is an experienced, qualified and result oriented Environment Professional having more than 14 yrs. of relevant experience in Climate Change (Mitigation & Adaptation), Environmental Due Diligence, Disaster Risk Reduction, Validation and Verification of GHG project under CDM, Verified Carbon Standard, Gold Standard & Social Carbon Standard, Brazil. He provides technical support for environmental investigative, consultative and remedial projects involving air, water and soil, Waste management, EIA, Environmental Compliance, ISO 14001, OHSAS 18001, GHG accounting (ISO 14064) and Carbon foot printing. Pankaj Kumar is Masters in Environment Management from Forest Research Institute (University), I.C.F.R.E. Dehradun, which is Centre of Excellence in South East Asia for Forestry education & research and PGDEL from National Law School of India University, Bangalore (India).
- Vipul holds Bachelor of Technology from VIT University Vellore in 2020. He has gained valuable work experience as a site engineer at Light House Energy Developers, where he was employed from May 2020 to August 2022. Vipul holds an IRCA certification as an ISO 9001 Lead Auditor, demonstrating his expertise in quality management systems. He is well-versed in ISO 14064-1, ISO 14064-2, and ISO 14064-3, which are standards for greenhouse gas accounting and reporting. Furthermore, Vipul has received training in ISO 17029 and ISO 14065, highlighting his proficiency in environmental auditing and conformity assessment. He has also completed Clean Fuel Regulation training from Environment and Climate Change Canada, demonstrating his expertise in environmental management and sustainability.
- Ms. Swati Mahajan is graduate in Environmental Engineering from Shivaji University, India and previously worked as an Environment Engineer at Eco Designs India Private Ltd., Pune. She is adept in designing of landfill sites for solid waste management. She also has hands on experience in cost benefit analysis and preparation of DPRs for SWM projects. She also has done a certified

course in carbon capture and storage from Edinburg University. Currently working as GHG assessor for projects under various GHG mechanisms like GCC, ICR, UCR and VERRA.

Mr. Vijayanand is an experienced professional, a strategic HSE expert with 16 years of leadership in environmental consulting, audit, and regulatory compliance. He has successfully implemented HSE/ESG rules across Asia and Europe, managing corporate and site-level HSE functions. His roles have involved EIA, waste management, and policy development. He is leading HSE and ESG efforts at Hero Future Energies, demonstrating budgeting, due diligence, and international standard implementation skills. He has contributed to impactful projects like ESIA, renewable energy initiatives, and audits. He is also having accreditation as a Lead Auditor in CDM and Verra by various DOEs/VVBs, he is qualified by Enviance as a TL, TR and Technical expert in Section 1.2, 3.1, 14.1.

Clarification request, corrective action request and forward action request

Table 1. CLs from this Project Verification

Classification	☐ CAR ☐ CL/CR ☐ FAR	Number:	01		
Raised by:	Mr. Pankaj Kumar	Document Reference	PCNMR		
Finding Description		Date:	29/11/2024		
PP shall update the section A.2 of PCNMR as per the UWR template of PCNMR version 3.0. Also, PP shall add section A.2.1					
Client/Responsible Party/Project Proponent		Date:	02/12/2024		
Response					
PP has corrected the section as per the UWR template pf PCNMR version 3.0. Also, PP shall add section					
A.2.1					
Validation/Verification	Team Assessment	Date:	05/12/2024		
PP has updated section A.2 and also added section A.2.1 as per the UWR template pf PCNMR version 3.0 and the same has been assessed in PCNMR version 2.0. Hence, this part of CL is closed.					

Classification	☐ CAR⊠ CL/CR ☐ FAR	Nun	nber:	02
Raised by:	Mr. Pankaj Kumar	Document Reference		PCNMR
Finding Description			:	29/11/2024
As per UWR RoU verification standard version 2.0, PP shall submit an undertaking for no double counting for current monitoring period and for project activity has neither been registered nor seeking registration under any other water registry or sustainable development programs.				
Client/Responsible Party/Project Proponent Date: 02/12/2024 Response				
•	uble Counting declaration for co	urrent	monitoring period.	
Validation/Verification 1	Team Assessment	Date) :	05/12/2024
activity has neither been	ndertaking for no double count registered nor seeking registra nd the same has been assesse	ation u	inder any other water reg	gistry or sustainable
Classification	☐ CAR ☐ CL/CR ☐ I	FAR	Number:	03
Raised by:	Mr. Pankaj Kumar		Document Reference	PCNMR
Finding Description			Date:	29/11/2024
PP shall submit the suppo	orting documents of few missin	ıg valı	l ues of ETP inlet.	
Client/Responsible Part	y/Project Proponent Respon	se	Date:	02/12/2024
PP has submitted the sup	pporting documents of inlet Mis	sing o	data.	
Validation/Verification Team Assessment Date: 05/12/2024				
	pporting documents of ETP inle ed in the excel sheet and are			
Classification	☐ CAR ⊠ CL/CR ☐ FAR	Nu	mber:	04
Raised by:	Mr. Pankaj Kumar	Do	cument Reference	PCNMR
Finding Description	Time Familia	Dat		29/11/2024
	ha alaay siatuwaa af tha waatay			
 PP shall submit the clear pictures of the meter, details of which are consistent with the submitted calibration certificate. As explained during the audit, client measures the ETP inlet water flow manually through a V notch. PP shall submit the details of the V notch and the same is to be added in PCNMR. 				
Client/Responsible Party/Project Proponent Date: 02/12/2024				
Response1.PP want to clarify that only one Flow meter has been installed in the outlet as that is tie up with MPCB.				
PP has already attached the meter photo with calibration certificate with serial no visible in the PCNMR. 2. PP has included and submitted the details of V Notch in the PCNMR.				
Validation/Verification Team Assessment Date: 05/12/2024				
 PP has submitted all the details of the flow meter which is installed at the outlet and the same has been verified by the assessment team. Hence, this part of CL is closed. PP has submitted the details of the V notch and the same has been added in PCNMR version 2.0. The details have been assessed by the verification team. Hence, this part of CL is closed.

			02/12/2024		
PP has already attached water quality report of both untreated and treated water which are mentioned in PCNMR (appendix).					
Validation/Verification Team Assessment Date: 05/12/2024				05/12/2024	
 PP has submitted the water quality report of both untreated and treated water and the same has been added in PCNMR version 2.0. The assessment team has verified the submitted supporting documents and have found consistent. Hence, this part of CL is closed. 					
Classification					08
Raised by:	Mr. Pankaj	Kumar	Doc	ument Reference	PCNMR
Finding Description			Date): 	29/11/2024

As discussed during the						
As discussed during the remote audit, the operational capacity of the plant is less than the actual capacity. PP shall clarify.						
Client/Responsible Pa	02/12/2024					
PP wants to clarify that the Operational Capacity of the plant is 0.563 MLD as the effluent water						
generated is in tune of	the same but has installed 1 MLD	ETP to incorporate any fur	ther expansion plans.			
Validation/Verification	Date:	05/12/2024				
PP has submitted the document which clarifies the operational capacity of the plant and the same has been added in PCNMR version 2.0. Assessment team has verified the documents and found to be consistent. Hence, this part of CL is closed.
